Welcome

Welcome to the first of many newsletters for Insight EDS. Spring is in the air especially after the long wet winter we have had. I hope you have had the opportunity to enjoy some of the beautiful sunshine that has been on offer.

Russell has managed to get down to the beach for a spot of kite fishing. The fresh fish has been most appreciated by his burgeoning wife and daughter.

Rebekah is now 7 months pregnant with baby number two and the countdown is on. If you notice Russell looking a little stressed this may be the reason why.

Christmas Break-ins

Every year over the Christmas period there is a noticeable increase in the number of break-ins and theft. It is important to make your home and business as secure as possible prior to heading away or closing down for the holidays.

Please check the following: Is your alarm monitored? If so is the Key Holder contact list held by monitoring up to date? Are your sirens and alarm system working correctly? Does your alarm have complete coverage of areas in which people could make access to your site? Are your windows and doors able to be locked securely? Are high value items out of site? Has equipment around your home or site been secured and put away? Does your home or business have our security stickers on it? The appearance of security is the first step in deterring would be offenders.

We highly recommend that your alarm is serviced annually and that it is monitored. If your alarm has not been serviced in the last year please book in now prior to the Christmas rush and if you would like to arrange monitoring please contact the office today.

New Website goes live

As some of you may be aware we have finally launched our new look website—check it out at www.insighteds.co.nz.

The website will be updated each month with a new & exciting happening in the world of electrical, data or security.

I hope everyone is starting to see our new logo around the place— vehicles & technicians shirts are the 3rd & final step in the process.

Mad Cows—Two cows were talking in the field.

One cow says, "Have you heard about the Mad Cow disease that's going around?"

The other cow answers, "Yeah, makes you glad you're a penguin, doesn't it?"

What's New—the Vanishing Reed

Incorporating aesthetics seldom seen in the security industry, the Power Series 9045 just released by DSC features bold, contoured lines and enlarged keypad buttons that are easy to interpret and use. Also, despite occupying the smallest footprint of any self-contained wireless alarm system available, the Power Series 9045 is equipped with the industry's largest, full-message LCD display.

A simplified wireless device enrolment process greatly reduces overall installation times. Installers no longer need to manually program serial numbers or wireless attributes. Instead, a series of enrolment screens prompt installers to confirm Electronic Serial Numbers (ESN), zone numbers and zone type. If

an installer attempts to enrol a device already recognized by the system, the keypad will identify it as a duplicate and display its assigned zone and ESN.

But most impressive of all is what they term the vanishing reed which is a wafer thin wireless reed switch, it has been out for a while and we have used it at a few jobs now where getting a wired solution was not possible. They work great and without prior knowledge as to what it is you would never guess just what it is. Battery life is 5-8 years.

To read more about his innovative new design check out the What's New on our website

50% Savings on Power Bill

How many lights does your business use? Whether it's highbays, lowbays or floodlights we can help you save on your power bill. According to our research there is considerable savings to be made - standard light consumption versus

(HIF) high intensity fluorescent lamp consumption indicate over 50% savings annually. HIF lamps can be quickly retrofitted into existing highbay or lowbay fittings. Contact us to see if this solution would work for you.

Staff Update

We have a new staff member on board; Rahim Harjee joined our team of security technicians & electricians at the beginning of March this year. Rahim is newly married and is proving to be a great asset to the company.

Todd has just come top of his Concept course. He is now the man for all Concept programming.

Cameron has been hanging upside down from ladders but has decided that this is not his future path and that yes he does want to be an electrician and not a trapeze artist.

Security News

Worldwide Growth of Biometrics. Scandinavian Airlines wins technology award for biometric solution. 140708.

Scandinavian Airlines are the first airline in the world to introduce biometric security checks to guarantee that passengers who hand in baggage are identical with those on the flight. It is now used by millions of passengers on an annual basis. It is the world's largest installation of its kind.

Virtual Stripping. Nude Scanning is poised to move to the forefront of aviation security.

3 D Imaging which takes a virtual nude image of your body using 'backscatter technology' is now being trialed at Melbourne, Adelaide and Sydney airports. It is already rolling out in USA, Canada & UK.

The controversial Xray machine bounces low-radiation X-rays off a person's skin to produce photo-like computer images of metal, plastic and organic materials hidden under clothes.
