

# PERMACONN GPRS PM1020 OUTSTATION

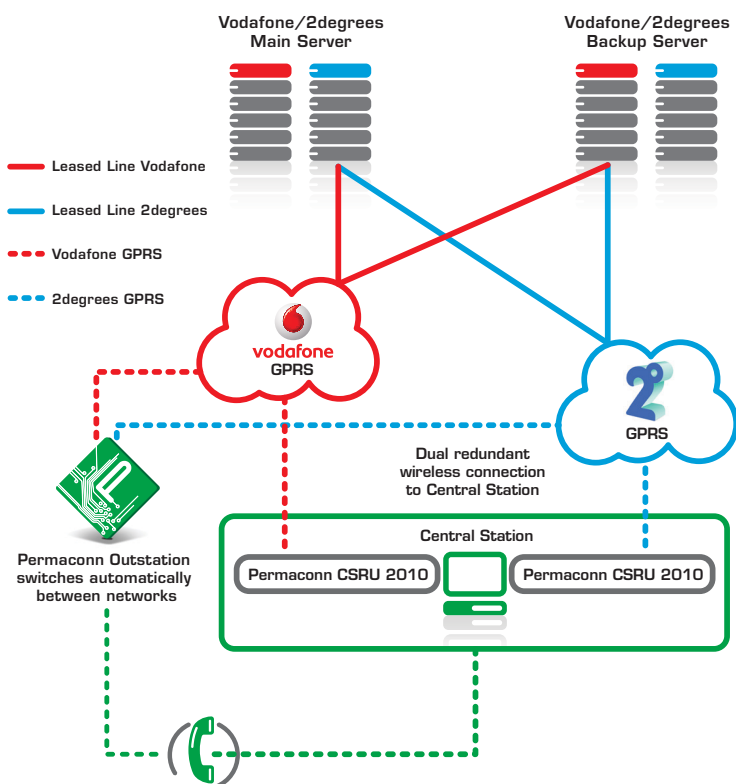

## PERMACONN GPRS PM1020 OUTSTATION

Permaconn is the only system that roams from one service provider to another in the event of an outage or any other technical difficulty. Permaconn offers a system that has Dual Sim-Redundancy (2degrees and Vodafone GPRS). The PM1020 is the only outstation that continues to poll on an alternative wireless network in the event of a service provider outage. The Permaconn System is compliant to Class 4 AS/NZ2201.5-2008.

The choice is simple. The choice is Permaconn.

## PERMACONN GPRS DEDICATED NETWORK

# DON'T BE CUT OFF. PERMANENT WIRELESS CONNECTION.

## PERMACONN GPRS PM1020

### HOW DO YOU PROTECT YOUR HOME AND BUSINESS?

It's widely known that thieves cut telephone lines in order to disable alarm systems. So what's the solution? Permaconn can supply you with an affordable alarm communication system that utilises GPRS to link you to our Central Monitoring station. That means no more telephone lines. And, this is not just any ordinary radio but PERMACONN, a product of Radio Data Comms, Industry Leaders in Security Technology.

### THE SIMPLE FACTS

Your current alarm system is only as good as your telephone line and this makes you very vulnerable. In an emergency your message must get through and the only way to ensure this happens is with Permaconn's wireless connection. This ensures that your alarm message is received by the Central Monitoring station without the need for phone lines.

### YOU'LL SAVE MORE THAN YOUR PROPERTY

Alarm panels may make a phone call every time the panel is armed / disarmed / tested or when an alarm message is sent back to the Central Monitoring station. When a Permaconn signalling device is attached all messages are sent using the GPRS network, saving daily telephone costs.

### BENEFITS

- No phone lines to cut.
- Permanent on-line connection.
- Choice of poll plan Class4, Class3/90 seconds or 1 hour.
- Compatible with most existing alarm systems.
- Recognised by major insurance companies.
- Fixed monthly costs – no surprise phone bills.
- GPRS Coverage from Vodafone and 2degrees.

### AUSTRALIAN STANDARDS

The Permaconn system has been certified and meets class 2, 3 and 4 of AS/NZ2201.5-2008. Insurance companies recognise the benefits of installing Permaconn and may offer genuine discounts.
